

CMPS 121 - Interim Presentation Details

Spring 2018

Presentations: May 7, 9, 11

Overview

This is a chance for you to present the prototype of your app, its current status, and future plans for the app.

Details

You will be limited to three slides containing text: 1) an "introductory" slide with team information, 2) a "status" slide with current progress (here you will demo your app if your app is ready to demo), and 3) a "future" slide that highlights changes your team will be making as the project moves forward. You may include additional slides that contain screenshots, illustrations, or charts (but not text!).

You will have 3 minutes maximum to demo your project, all group members are expected to take part.

Three other randomly chosen groups will evaluate your group and your group members.

Your final score for the interim presentation will be based on 15% of your evaluation score (evaluations from your classmates and the instructor), 60% on the average score of your teammates, and 25% will be whether you completed an evaluation for other groups.

I will be posting the times (during week 5) that all groups will be presenting. Please be in the room and ready to go at least 10 minutes prior to your team's appointed presentation time. You are expected to quietly set up your presentation while the prior presenter is answering questions. I would highly recommend running your slides as a PDF (instead of docx). If you need to run your slides on the classroom computer, please bring a flash-drive with your slides ready to go.
